Fiscal Year:	FY 2024	**Task Last Updated:**	FY 06/11/2024
PI Name:	Collins, Kristina Henry Ph.D.		
Project Title:	LBJ SHIP (Lyndon B. Johnson Institute for STEM Education and Research Space Health Inclusion Partnership)		
Division Name:	Human Research		
Program/Discipline:			
Program/Discipline--Element/Subdiscipline:			
Joint Agency Name:		**TechPort:**	No
Human Research Program Elements:	None		
Human Research Program Risks:	None		
Space Biology Element:	None		
Space Biology Cross-Element Discipline:	None		
Space Biology Special Category:	None		
PI Email:	khc19@txstate.edu	**Fax:**	FY
PI Organization Type:	UNIVERSITY	**Phone:**	(512) 245-8492
Organization Name:	Texas State University - San Marcos		
PI Address 1:	601 University Drive		
PI Address 2:			
PI Web Page:			
City:	San Marcos	**State:**	TX
Zip Code:	78666-4684	**Congressional District:**	21
Comments:			
Project Type:	Ground	**Solicitation / Funding Source:**	
Start Date:	07/01/2022	**End Date:**	02/29/2024
No. of Post Docs:		**No. of PhD Degrees:**	
No. of PhD Candidates:		**No. of Master' Degrees:**	
No. of Master's Candidates:		**No. of Bachelor's Degrees:**	
No. of Bachelor's Candidates:		**Monitoring Center:**	TRISH
Contact Monitor:		**Contact Phone:**	
Contact Email:			
Flight Program:			
Flight Assignment:			
Key Personnel Changes/Previous PI:	Per TRISH, Co-Investigators Lisa Hanson and Sara Torres, Ph.D. were added to the project (Ed., 6/11/24).		
COI Name (Institution):	Hanson, Lisa M.Sc. (Texas State University) Torres, Sara (Texas State University)		
Grant/Contract No.:	NNX16AO69A-DIV0002		
Performance Goal No.:			
Performance Goal Text:			
	TRISH Program Note The Translational Research Institute for Space Health (TRISH) supported two projects through its Diversity Program prior to the program close in December 2023. These partner programs worked with the Institute to recruit, engage, and train researchers on TRISH and NASA's needs for human health and performance in space. Seasoned space health mentors engaged with over 50 mentees in the program to provide advice, share research findings from the scientific literature, and foster collaborations to the benefit of the entire space biomedical community. (Ed., 6/11/24) LBJ SHIP Task Description The underrepresentation issues afflicting the space health research community are akin to those of the broader STEM communities - females and students from historically underserved populations remain underrepresented. Intellectual		

Task Description:	Merit and Broader Impact. STEM focused research is at risk for being designed and presented without attention to culture because these fields of study and the way that we present information about them can appear to be, on the surface, objective and acultural - conceptually distant from or absent of culture. We do not shed our cultural practices just because we are presenting or being presented with facts and/or formulas. “Cognitive diversity suggests that differences in perspective, as a by-product of cultural differences …cultivates creative problem solving and innovation that should be appreciated and valued” (Collins, 2021). Gender and culture not only affect STEM itself, but they influence our approach to scientific research, development, strategies for presenting, and the extent to which we accept scientific information (McGhee & Bentley, 2017; see also Collins et al., 2019). NASA (National Aeronautics and Space Administration) recognizes that critical steps must be taken to broaden the participation of underrepresented groups and Minority-serving Institutions (MSIs) in its space science missions, research, and education programs (NASA, 2010). The Lyndon B. Johnson (LBJ) Institute2 for STEM Education and Research at Texas State University (a Hispanic Serving Institute) proposes a Space Health Inclusion Partnership with the Translational Research Institute for Space Health (TRISH), hereinafter LBJ SHIP Project, to address cultural oversight that serve as a barrier to equity in STEM and space health research. LBJ SHIP Project’s expected outcomes will positively impact the diversity and strength of space health research as well as inform best practices across multiple scientific disciplines and developmental models (e.g., project-based or experiential models) that can enhance the experience of potential underrepresented and underserved post-doctorate and early career (UUPEC) research professionals and their contribution space health research.
Rationale for HRP Directed Research:	
Research Impact/Earth Benefits:	
Task Progress:	NASA (National Aeronautics and Space Administration) recognizes that critical steps must be taken to broaden the participation of underrepresented groups and Minority Serving Institutions (MSIs) in its space science missions, research, and education programs (NASA, 2010). The underrepresentation issues afflicting the space health research community are akin to those of the broader STEM communities – females and students from historically underserved populations remain underrepresented. The Lyndon B. Johnson (LBJ) Institute for STEM Education and Research at Texas State University (a Hispanic Serving Institute) proposes a Space Health Inclusion Partnership with the Translational Research Institute for Space Health (TRISH), hereinafter LBJ SHIP Project, to address cultural oversight that serve as a barrier to equity in STEM and space health research. LBJ SHIP Project’s expected outcomes will positively impact the diversity and strength of space health research as well as inform best practices across multiple scientific disciplines and developmental models (e.g., project-based or experiential models) that can enhance the experience of potential underrepresented and underserved post-doctorate and early career (UUPEC) research professionals and their contribution space health research. Over the course of this project, the LBJ SHIP hosted an in-person workshop, a virtual workshop, and several webinars open to the public, as well as supported dozens of mentees in learning about space health.
