Fiscal Year:	FY 2004	**Task Last Updated:**	FY 03/29/2006
PI Name:	Meck, Janice V Ph.D.		
Project Title:	Mechanisms of Post-Space Flight Orthostatic Intolerance		
Division Name:	Human Research		
Program/Discipline:	NSBRI Teams		
Program/Discipline--Element/Subdiscipline:	NSBRI Teams--Cardiovascular Alterations Team		
Joint Agency Name:		**TechPort:**	No
Human Research Program Elements:	None		
Human Research Program Risks:	None		
Space Biology Element:	None		
Space Biology Cross-Element Discipline:	None		
Space Biology Special Category:	None		
PI Email:	janice.v.meck@nasa.gov	**Fax:**	FY 281-483-4181
PI Organization Type:	NASA CENTER	**Phone:**	281-244-5405
Organization Name:	NASA Johnson Space Center		
PI Address 1:	2101 NASA Pkwy		
PI Address 2:

Grant/Contract No.:	NCC 9-58-CA.002.11FL		
Performance Goal No.:			
Performance Goal Text:			
Task Description:	The hypothesis of this study is that post-spaceflight orthostatic hypotension may be related to changes in vascular responsiveness during flight. There is abundant animal data that support this idea. Changes in the vasculature of hindlimb suspended rats show changes in both endothelial and smooth muscle function. We will study vascular responses in both the arms and legs in astronauts before and after short-duration flights.		
Rationale for HRP Directed Research:			
Research Impact/Earth Benefits:	The results from this study will gain important new informaiton about how the vasculature itself helps to regulate blood pressure in normal and compromised individuals.		

Task Progress:	No progress report this period.
