Fiscal Year:	FY 2004	**Task Last Updated:**	FY 03/30/2006
PI Name:	Whitmore, Mihriban Ph.D.		
Project Title:	Emergency Medical Procedures on ISS: An Independent Human Factors Analysis and Review		
Division Name:	Human Research		
Program/Discipline:	ADVANCED HUMAN SUPPORT TECHNOLOGIES		
Program/Discipline--Element/Subdiscipline:	ADVANCED HUMAN SUPPORT TECHNOLOGIES--Space human factors engineering		
Joint Agency Name:		**TechPort:**	No
Human Research Program Elements:	None		
Human Research Program Risks:	None		
Space Biology Element:	None		
Space Biology Cross-Element Discipline:	None		
Space Biology Special Category:	None		
PI Email:	mihriban.whitmore-1@nasa.gov	**Fax:**	FY 281-244-5773
PI Organization Type:	NASA CENTER	**Phone:**	281-244-1004
Organization Name:	NASA - Johnson Space Center		
PI Address 1:	Mail Code SF3		
PI Address 2:	2101 NASA Road 1

Grant/Contract No.:			
Performance Goal No.:			
Performance Goal Text:			
Task Description:	Emergency medical capabilities currently available aboard the International Space Station (ISS) were developed over recent years to provide the training and equipment to resuscitate an injured crewmember, along with a reference book -'ISS Integrated Medical Group (IMG) Medical Checklist, JSC 48522'- for the crew's use. Two International Space Station (ISS) Crewmembers are designated as Crew Medical Officers (CMO's) and are trained in these procedures. In the initial phase of the ISS program – up to and including Expedition 8 - no physicians are currently planned as crewmember. As a result, crew will have no specialist knowledge available to them on orbit, but will need to rely upon air to ground communication, the checklist, a limited medical pack, and their recall of the emergency medical procedure training. This project entails a Human Factors assessment of the ISS medical procedures and equipment, in the context of crew training, likely medical emergency scenarios, air to ground communications, and predicted patient outcome. The aim is		

	to determine human interface in the procedures, training, communications and equipment, and to recommend solutions that will improve survival chance of crewmembers in the event of a medical emergency.
Rationale for HRP Directed Research:	
Research Impact/Earth Benefits:	The successful demonstration of effective medical aid prototypes and procedures will be applicable in other remote environments where no physician is available.
Task Progress:	No progress report this period.
