Performance Goal No.:			
Performance Goal Text:			
Task Description:	The University of Michigan - NASA Bioscience and Engineering Institute (UM-NBEI)will be a national resource for NASA as well as a global resource for researchers and educators. We will integrate the physical sciences and engineering with biology and medicine into a partnership with NASA and our industry colleagues to advance the frontiers of medicine and health on earth and in space. The initiative is broad with interlaced goals in research, education, technology development and outreach. The Education component exists at all academic levels and will include new courses and new degrees. We plan further education for summer high school students, summer K-12 teachers, research internships for clinicians, and scientist exchanges among NASA, our industrial partners and the University of Michigan. The Outreach plan will provide access to UM-NBEI personnel and resources at many levels and to a wide community, both by direct interaction and by maintaining an information repository. This includes K-12 students, K-12 teachers, women, underrepresented minorities, professional societies and agencies, and our industrial colleagues. The industrial outreach and educational arrangements incorporate the shared mentoring of research students		

	and technology transfer of research developments to industry as well as government. The Research will occur under 4 Themes: Tissue Bioscience and Engineering; Transport Phenomena in Biology and Microdevices; Molecular Biophysics and Bioengineering; and, Tissue Bioscience and Engineering. There are also 4 Research Cores: Bioinformatics; Mathematical Modeling and Computational Biology; MEMS; and, Flight Hardware Development.
Rationale for HRP Directed Research:	
Research Impact/Earth Benefits:	
Task Progress:	No progress report received this reporting period. For further information on this task, contact the Task Book Help Desk at taskbook@nasaprs.com Note: project did not appear in Task Book prior to 9/2006.
