Flight Assignment:			
Key Personnel Changes/Previous PI:			
COI Name (Institution):			
Grant/Contract No.:			
Performance Goal No.:			
Performance Goal Text:			
Task Description:	The research program uses a test article based on the Mars Thermal Environment and Radiator Characterization (MTERC) Flight Experiment, previously manifested for launch on the Mars 2001 Surveyor Lander. The test article will include multiple radiator coupons with different coatings to be tested in parallel under different operational environments (i.e., a number of simulated Mars sky temperatures, various dust density levels, different atmospheric compositions). Testing will be performed using the NASA Johnson Space Center Mars Simulation Chamber. A significant change in the properties of the radiator coatings is expected (as much as 30%) with increased accumulation of Martian dust, and radiator degradation factors will be computed.		

Rationale for HRP Directed Research:	
Research Impact/Earth Benefits:	
Task Progress:	No progress this period.
