COI Name (Institution):			
Grant/Contract No.:			
Performance Goal No.:			
Performance Goal Text:			
Task Description:	This task provides for the development of a plastic and waste compaction technology that can be applied to short as well as long duration missions, that can handle wastes with a significant plastic composition, that can reduce biological hazards, that can minimize crew interaction, and that can provide significant volume reduction. The technology takes advantage of the low melting point of plastics to compact the plastic materials using a combination of heat and pressure. The early deliverables include a preliminary design of a lab scale compaction system including the heating (melt) approach, grinding requirement (if any) and the compactor.		
Rationale for HRP Directed Research:			
Research Impact/Earth Benefits:	There are applications to hotel, hospital, ship, and home waste management systems.		

Task Progress:	No progress report this period.
